PROTOCOL K-650 – Calcium, Rust & Lime Remover

Description:

Protocol K-650 is a **CFIA approved, Ecologo certified** and **Green Restaurant Association endorsed tub, tile and grout cleaner** made from an organic salt/surfactant blend that is designed to quickly penetrate dirt, oil, grease, calcium, lime, rust and other everyday soils.

Precautions:

- ✓ Glove usage is always recommended - safety first
- ✓ **Rinse or wipe down surfaces with water after cleaning**
- ✓ SDS sheet and product information sheet available at – www.scitechinc.ca

Directions:

K-650 can be applied using a foam sprayer, sponge, brush, scrubbing pad or a cloth. **K-650 is a ready to use product** and is best applied directly out of the bottle using the provided foam sprayer or flip top cap. Allowing product surface contact time of 10-30 seconds will aid in the cleaning process. For tough stains (coffee stains on sidewalks) allow the product to stand for 5-10 minutes. Agitating the surface (scrubbing pad, brush) will produce better results. **Always wipe with a damp cloth or rinse with water after applying.**

Where Can I Use K-650:

- ✓ Excellent on stone surfaces - effectively removes calcium, lime & rust deposits
- ✓ On any surfaces that encounter water regularly (bathrooms, kitchens)

Sidewalk stains

Urinals

Rust: DT signs, fridge, handles, taps etc.

Grout on bathroom walls & floors

Freezer base

Iced cappuccino machine (wheels & racks)

Mop sink & pails

Textured kitchen tile floor

Kitchen shelving

Tea pots & baskets heavily soiled (weekly)

Exterior brick on building (calcium)

Bathroom fixtures
